

Morpheus Consortium National Board of Perioperative Care

Perioperative care is an evolving field that addresses the vulnerabilities of increasing age and complexity of patients and the increase in the number of surgical procedures being performed in United States. There is a critical need to standardize the evidence-based care of surgical patients at risk to ensure optimal outcomes.

The National Board of Perioperative Care comprises a group of health care professionals who are considered experts in their respective areas of perioperative care. The aim of the board is to formulate a perioperative care syllabus for use in the training of health care professionals in perioperative care in the United States.

Transforming Perioperative Care
morpheusconsortium.org

Exposure to the science and practice of perioperative care through online and in-person learning opportunities, by self-discovery and interaction with experts.

Topics covered include:

- The rationale for perioperative medicine
- Outcome differences related to changes in perioperative care
- Care modifications that align all steps, from considering surgery to full recovery
- Major abdominal surgery enhanced recovery protocols
- Orthopedic surgery enhanced recovery protocols
- Opioid minimization and opioid-free anesthesia
- Fluid and hemodynamic optimization during major surgery
- Preoperative clinics as a model for the perioperative team

Please refer to the website for the complete syllabus.
